Chinese Higher Education Journals (CJFR) is China's sole full-text database of periodicals on higher education teaching research. Focusing on higher education, vocational education, and teaching reference works, CJFR features the full texts of higher education teaching journals and other academic journals. CJFR is a powerful resource for educators and administrators, assisting in school management and administration, teacher preparation, curriculum development, student learning, and more. With over 540 journals and 5.1 million articles, users can browse content by topics specific to higher education.

CJFR features over 5.1 million articles from 545 higher education teaching journals – including 67 core journals and 42 exclusive journals – and has a 95% inclusion completion rate. Content is divided into 13 categories, with subdivisions in each category, together totaling more than 1,700 classifications.

CJFR Chinese Higher Education Journals

Features and Functions

■ Professional editors carry out content classification with a 99.5% accuracy rate.

■ Content is of value for teaching preparation, subject research, school management, curriculum creation and development, and research-based learning.

■ Search content by multiple fields including theme, title, keyword, summary, unit journal title, references, full text, year, period, fund, ISSN, and China Library Classification (CLC) code.

■ Browse content by categories specific to higher education, or browse curated topics such as career planning, entrepreneurship, career guidance, and policies and regulations.

■ CNKI's Knowledge Network Node supports discovery of additional related content with tools such as citation networks, similar documents, related author literature, and related institutional literature.

China Research Gateway (CRG) presents the full spectrum of Chinese research, with exhaustive representation of STEM, social science, and humanities disciplines. Featuring an unparalleled breadth of sources, including scholarly journals, monographs, statistical publications, government documents, newspapers, dissertations, conference proceedings, patents, and many other content types, CRG offers a centralized means for discovery and access to this rich trove of research, specifically tailored to serve the needs of North American scholars and institutions.
