

# east view CHINA RESEARCH GATEWAY

Comprehensive Access to Chinese Science and Technology,  
Social Science, and Humanities Research

## China Research Gateway presents the full spectrum of Chinese research, with exhaustive representation of STEM, social science, and humanities disciplines

China is not only a rich subject for scholarly inquiry, it is also one of the world's most prolific sources of research across all disciplines. The scale of Chinese scholarly output in areas such as artificial intelligence, materials science, medicine, transportation, climate science, cyber security, communications technology, and quantum computing is extraordinary and continues to grow, making it essential for institutions to expand their intake of Chinese e-resources.

China Research Gateway (CRG) from East View Information Services closes the gap, bringing together the full spectrum of research emerging from China in one convenient and comprehensive package, including a wealth of English-language content. CRG presents a centralized means for discovery and access to this rich trove of research, specifically tailored to serve the needs of North American scholars and institutions.

### Benefits of China Research Gateway

- **Make efficient use of your funding:** Purchased separately, the resources in CRG would cost hundreds of thousands of dollars. CRG provides comprehensive coverage of Chinese research across a wide range of subjects at a manageable price, allowing your institution to maximize funding and serve the widest audience of scholars possible.
- **Simplify acquisition and use of Chinese e-resources:** The current state of Chinese e-resources is quite fragmented, with numerous smaller resources competing for attention, each with its own platform, business model, and even license agreement. CRG simplifies the decision-making process, offering a single unified portfolio of resources and providing unrestricted access to the fullest spectrum of research content from China.
- **Support equity, diversity, and inclusion in your library collections:** CRG provides scholars with access to publications from China like never before, helping to promote critical thinking, information exchange, and discovery of different perspectives across a wide variety of disciplines.
- **Support scholars with abundant resources on the latest research from China:** CRG presents an unparalleled depth and breadth of sources, including scholarly journals, government documents, statistical publications, monographs, newspapers, dissertations, patents, and more, on the latest research across all disciplines, including STEM, social sciences, and humanities.
- **Support a wide range of scholars with English-language content from China:** CRG features several English-language databases, including content from academic journals, yearbooks, conference proceedings, dissertations, and more. In addition, many other databases within CRG feature English-language interfaces and abstracts, and support searching in English, making these valuable resources more accessible to a wider audience.
- **Support visiting scholars and strengthen recruitment efforts:** CRG offers visiting scholars and faculty from China a wealth of resources for their research, while also demonstrating to potential Chinese recruits the level to which your institution values the research coming out of China and how it supports the work being done by visiting scholars.

## CRG: Your Gateway to Cutting-Edge Research From China

China Research Gateway puts a plethora of Chinese research at your fingertips. Continue below to explore the Comprehensive Databases that make up the backbone of CRG. These databases form the core of any quality scholarly collection from China. These are not only the most popular types of sources for scholarly research – including journals, statistical publications, dissertations, and more – but are also the most widely adopted databases of Chinese publishing by North American academic libraries for the past 20 years. In addition, CRG includes an assortment of specialized subject databases. Each is crafted to address the particular needs of specialists in a field of study: from customized search and analysis features, to convenient compilations focused on the most compelling subjects from medicine to infrastructure to art.

### Comprehensive Databases

#### Journals and Serial Publications

##### CAJ China Academic Journals

中国期刊全文数据库

The most comprehensive full-text database of Chinese journals in the world, covering 99.9% of all academic journals published in China

##### CMSD China Monographic Serials

中国学术辑刊全文数据库

The only monographic serials full-text database in China, presenting a collection of irregularly published literature

##### CYFD China Yearbooks

中国年鉴网络出版总库

A comprehensive collection of authoritative Chinese yearbooks, including national, regional, industrial, and more

#### Dissertations

##### CDMD-CDFD China Doctoral Dissertations

中国博士学位论文全文数据库

The most comprehensive database of dissertations from top Chinese universities and research institutes

##### CDMD-CMFD China Master's Theses

中国优秀硕士学位论文全文数据库

The most comprehensive database of theses from top Chinese universities and research institutes

#### Reference

##### CRWO China Reference Works

中国工具书网络出版总库

An indispensable reference collection of general and specialized dictionaries, encyclopedias, handbooks, atlases and more

#### Statistical Publications

##### CSYD China Statistical Yearbooks

中国统计年鉴数据库

The leading database of authoritative statistical data in China covering all aspects of China's technical, economic, industrial, environmental, and social development

#### Conference Proceedings

##### CPCD-CPFD China Conference Proceedings

中国重要会议论文全文数据库

The most comprehensive full-text database of proceedings from national conferences in China

##### CPCD-IFPD International Conference Proceedings

国际会议论文全文数据库

Comprehensive collection of international conference proceedings on a wide variety of topics

#### News Media

##### CCND China Core Newspapers

中国重要报纸全文数据库

Daily content from hundreds of Chinese newspapers

## CRG Supports Research Across a Wide Variety of Disciplines

CRG represents a dramatic improvement in North American access to Chinese research. CRG covers all disciplines with significant quantity and quality.

**STEM** – CRG represents a transformative level of access to STEM research materials. Historically, North American libraries have acquired less STEM content from China than social science and humanities content. CRG represents an opportunity to close that gap, allowing North American researchers to make full use of China’s rapid STEM research development. Particular highlights in the CRG package include the STEM series of China Academic Journals, China Conference Proceedings, and China Patents. Both China Conference Proceedings and China Patents allow STEM researchers to track the most recent developments in their fields, including those developments that have not made it to publication.

**Social Sciences** – Social science research depends and thrives on having a variety of content types. CRG allows social science researchers to build robust arguments using statistics from China Statistical Yearbooks, government publications from China Government Gazettes, laws and cases from China Legal Knowledge, and news from China Core Newspapers.

**Humanities** – CRG provides a greater breadth and depth of Chinese resources for humanities researchers. In the arts, CRG offers China Art Digital Library, a treasure trove of museum catalogues and high-quality art images, which are available for PDF download. In literature, CRG contains China Monographic Serials, which includes thematic literary analysis across a huge variety of topics, from fictions to Classical Chinese poetry. CRG also includes key cornerstone databases for Chinese humanities research: humanities series of China Academic Journals and China Doctoral Dissertations.

**English Content** – With CRG, Chinese resources are easier to access and understand for researchers who do not read Chinese. The CRG portal features English user guides for all of CRG’s constituent databases. The portal also shows users which databases have English language interfaces and highlights which databases are entirely in English. While the majority of CRG’s databases have English interface options as well as English abstracts and indexing, Academic Reference is entirely in English, including English full text.

## Simplify access to dozens of Chinese resources with a single, uniform portal

CRG provides an intuitive, English-language portal designed by East View for ease of browsing and accessing all the databases included.

Users will have access to uniform information across all CRG resources, including:

- Resource metadata and descriptions
- Resource fact sheets
- Title lists (where applicable)
- Link to access database
- User guides

In addition, the CRG portal offers access to a help section, FAQs, and customer service and support contacts.
